

Answer key & talking points

No sheet needs a screen. The goal is not getting it right: it is naming what the child already notices.

01 · Finish the pattern

▲ ● · 12 and 14 · small-medium-large · coral-yellow. Always ask “what is the rule?” — that is exactly what a model does.

02 · Cat or dog?

C · ? · D · ? · C · D. The “?” clues show why machines get it wrong. Shown a rabbit, it answers cat or dog, because it knows no other option.

03 · Train the robot

Fruit, vegetable, fruit, vegetable, and the tomato left open. Rule: sweet and with seeds usually counts as fruit — a good rule, not a perfect one.

04 · Robot or human?

Rows 1, 3 and 5 are AI; 2, 4 and 6 are ours. Ticking “both” and defending it is fine — the argument is the exercise.

05 · Write a good prompt

No single answer. If you can, test the prompt together and compare it with a vague one: the difference teaches itself.

06 · True or made up?

True · made up · true · made up (no such book) · made up (most snakes are not venomous). The habit to build is checking, not distrusting everything.

07 · AI hunt at home

All twelve count. The point is noticing how much of the house learns from us — and what exactly it learns.

08 · Our AI agreement

Let the child cross things out and rewrite them. An agreement they helped write is an agreement they keep.

09 · The algorithm maze

More than one route works; the order of the steps is what matters. Follow the instructions literally, mistakes included — that is how debugging is taught.

10 · AI vocabulary

Data = examples already seen · Pattern = what repeats · Algorithm = recipe of steps · Prompt = the request · Hallucination = inventing with total confidence · Bias = people missing from the examples.

11 · Who was left out

Farm, wild and foreign animals · houses of wood, stilt houses, homes outside Europe · children, older people, regional accents and other languages.

12 · My AI assistant

No key. Pay attention to the rules the child writes — they reveal what they already fear or value in technology.

Three lines to keep in your pocket

“AI learns from examples, not by magic.” · “It sometimes invents things and sounds certain.” · “A person always makes the final call.”

Suggested order

Ages 6–8: 01 → 02 → 03 → 07 → 12, one sheet a day. Ages 9–12: 04 → 05 → 06 → 09 → 10 → 11, finishing with sheet 08 signed by everyone.
